Jae Hyung Ju

jhju@gatech.edu

Interest

My research focuses on computer architecture and systems for AI workloads. Specifically, my recent works include data movement optimization in CPU-GPU systems for LLM inference, GPU memory system design for emerging technology, and efficient AI algorithms.

Education

Georgia Institute of Technology — Atlanta, GA, United States
Ph.D. in Electrical and Computer Engineering — 2024 - 2029 (Expected)
Advisor: Prof. Moinuddin Qureshi

Seoul National University (SNU) — Seoul, South Korea
B.S. in Electrical and Computer Engineering — 2018 - 2024
Summa Cum Laude, GPA: 4.24/4.30

Research Experience

FAST Lab, Georgia Tech (Advisor: Prof. Moinuddin Qureshi) — Jan 2025 - Present

- Proposed GPU software and microarchitecture changes to incorporate High-Bandwidth Flash (HBF) on GPUs, mitigating read amplification caused by its large granularity while retaining the capacity benefit [P1].
- Developed a memory allocation system for concurrent GPU and CPU memory access in LLM inference, increasing goodput by 55% without any kernel code changes [S1].
- Developed a policy that activates fewer experts in mixture-of-experts (MoE) LLMs, reducing time between tokens by 23% with no accuracy loss [S3].

Scalable Computer Architecture Lab, SNU (Advisor: Prof. Jung Ho Ahn) — Jan - Dec 2023

- Proposed algorithms that accelerate CNN inference under fully homomorphic encryption by 1.5–2.7× [P4].

Work Experience

Microsoft — May-Aug 2026
Research Intern, Azure Systems Research/Microsoft Systems Research — Redmond, WA

- Analyzed scale-out network bottlenecks in shared KV cache storage using GitHub Copilot agentic traces.
- Developed a multi-rack simulator to design GB200/VR200 NVL72 servers for agentic workloads.

Qualcomm — May-Aug 2025
Engineering Intern, On-target software team — San Diego, CA

- Improved traceability in the ExecuTorch AI compiler for edge devices.
- Developed an automated tracing tool of torch.fx graph transformations with negligible overhead.

CryptoLab — Apr-Jul 2024
Research Intern, Core Development Team — Seoul, South Korea

- Developed multi-GPU acceleration for Llama 2 and ResNet-18 under fully homomorphic encryption (FHE).
- Designed the initial architecture and abstractions for a new FHE library.

Honors

Overseas PhD Scholarship, Korea Foundation for Advanced Studies (KFAS) — 2024 - 2029

Outstanding Graduate Award, Seoul National University (SNU) — 2024

Presidential Science Scholarship, Korea Student Aid Foundation (KOSAF) — 2018 - 2023

Teaching

- Teaching Assistant for ECE 4100/6100 - Advanced Computer Architecture — Fall 2025
- Teaching Assistant for ECE 4100/6100 - Advanced Computer Architecture — Spring 2025

Projects

- Linux kernel hacking: custom scheduler and lock — Spring 2023
- CNN accelerator for VGGNet in Verilog on Arty A7 FPGA — Fall 2022
- Training and evaluation of a neural-network-based wireline equalizer — Fall 2022
- Simulator for a 6T2R-based spiking restricted Boltzmann machine chip — Summer 2022
- 16-bit pipelined MIPS CPU with cache and cycle-stealing DMA in Verilog — Spring 2022

Relevant Coursework

- **Computer Architecture**: Memory Systems Architecture, Hardware Software Co-Design for Machine Learning Systems, Advanced Computer Architecture, Computer Organization and Design
- **Systems**: Systems for AI, Operating Systems, Systems Programming, Data Communication Networks
- **Machine Learning**: Conversational AI, Generative Deep Learning, Machine Learning Fundamentals
- **Digital Design**: Digital Systems Design and Experiments, Digital Integrated Circuits

Skills

C++, CUDA, Python, SystemVerilog, vLLM, gem5, ChampSim, Accel-Sim, Scale-Sim, ASTRA-Sim
